Tyre Inflation System

Tyre pressure monitoring from ROR

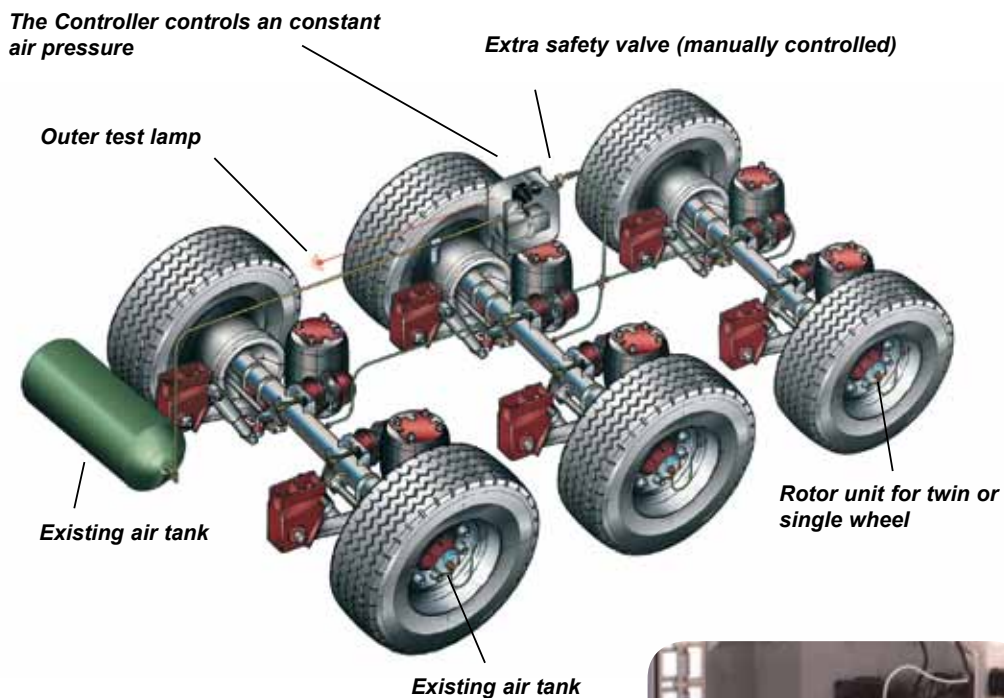

Tyre Inflation System

The system optimizes comfort, safety and costs.

The system monitors and automatically corrects the tire pressure for the trailer/hanger, while driving.

By puncturing, the driver is alerted in 3 levels, small puncture, medium puncture and strong puncture. For small and medium punctures, the system can complement the tire until it is convenient to repair the damage.

The system pays back the first year alone on tire wear, fuel savings and less downtime.

The system monitors and automatically adjust the tire pressure in all affiliated tires. The axle housing uses as air tank, along with a "step-up" pump, which ensure that the adjusted pressure is constant. A warning lamp will brighten when the pressure drops. The system has safety valves several places.

With our tire pressure monitoring:

- You will reduce your maintenance costs
- Significantly less tire wear
- Savings in fuel consumption
- Less downtime
- Better comfort
- Substantially improved security
